

OPTIONAL**Neutral XZ System for protection from contact with Oxygen****Available for the following models:**

- Velvet XZ 15

- Velvet XZ 23

- Velvet XZ 34

Technical description

System for inert gas injection that allows to limit the contact of the product with the oxygen during the filling phases.

This system puts inert gas in the tank only and it is composed of a manual valve and a non-return valve installed by the axial valve.

The Neutral XZ system ensures a good product protection at a low management and investment cost.

Use:

The customer has to arrange for the connection with a CO₂ (carbon dioxide) or N₂ (nitrogen) inert gas source, excluded from the supply. The gas can be provided by: a generator or storage, cryogenic tank, bottles or pack bottles. The customer shall provide gas with a temperature between 5 and 50°C at 2 bar maximum pressure. The injection in liquid state is not admitted.
