| - Velvet 40 | - Velvet T11.5 | - Velvet T43 |
| - Velvet 50 | - Velvet T15 | - Velvet T60 |
| - Velvet 65 | - Velvet T26 | - Velvet T75 |
| - Velvet 80 | - Velvet T32 | |

Technical description

This Pulse Jet automatic washing system allows to wash inside the draining channels and to rinse the interior of the tank and the pressing membrane.

The system consists of a pneumatic injector and valves for mixing and air/washing water injection.

The washing operations are carried out by means of a controlled injection of water and high pressure compressed air and this allows to increase the efficiency of the washing and to reduce the water consumption.

The washing cycle is completely automatic and it is programmed and managed by the PLC.

Utilities:

- 5 bar pressure water with a 10 m³/h average capacity
- 8 bar pressure compressed air with a 36 Nm³/h average capacity

In case it is not available an air system with the above-mentioned features, Diemme Enologia can provide a compressor complete with suitable tank for a right working.
